

TAXA FOR REMOVAL FROM THE HAMPSHIRE NOTABLES LIST V15->17

Jan 2017

Taxon		Reason
Agrostemma githago	Corn-cockle	It has not survived at the one site where it may have been a persistent archaeophyte. The county record is now totally swamped with short-term introductions in "wild flower mixes" (sometimes including a related alien species) of no conservation value.
Agrostis vinealis	Brown Bent	Now better recognised and better recorded; no longer qualifies as 'scarce' in either vice-county or overall.
Bromus racemosus	Smooth Brome	No longer scarce in either vice-county or overall; appearing increasingly as arable weed.
Carex x turfosa		Sole record is no longer accepted.
Dactylorhiza traunsteinerioides	Narrow-leaved Marsh Orchid	No longer accepted as a species existing in S Britain. All plants referable to <i>D. praetermissa</i> , and a range of forms exists in almost all populations of the latter.
Drosera x beleziana		There is nothing to substantiate that this hybrid ever occurred in Hampshire.
Geranium rotundifolium	Round-leaved Crane's-bill	No longer scarce in either vice-county or overall.
Hordeum secalinum	Meadow Barley	Better recording has now removed this from the 'Scarce' list for VC12.
Luzula forsteri	Southern Woodrush	Better recording has now removed this from the 'Scarce' list for VC12.
Papaver dubium	Long-headed Poppy	Included on basis of possible decline, latest evidence not showing this
Papaver hybridum	Rough Poppy	Included on basis of possible decline, latest evidence not showing this
Poa angustifolia	Narrow-leaved Meadow-grass	Better recording has now removed this from the 'Scarce' list for VC12.
Poa humilis	Spreading Meadow-grass	Better recording has now removed this from the 'Scarce' list for VC12.
Sorbus torminalis	Wild Service-tree	Better recording has now removed this from the 'Scarce' list for VC12.
Thalictrum flavum	Common Meadow-rue	Better recording has now removed this from the 'Scarce' list for VC12.
Zannichellia palustris	Horned Pondweed	Better recording has now removed this from the 'Scarce' list for VC12.

TAXA FOR ADDITION TO THE HAMPSHIRE NOTABLES LIST V15->V17

Jan 2017

Taxon		Reason
Carex x elytroides	Carex acuta x nigra	Refound after an absence of over 100 years in VC11
Taraxacum ciliare		Confirmed present within VC11 by Czech expert. Endemic to Britain, Channel Islands and Hants (New Forest)
