

Apium graveolens L.**Wild Celery**
1823-2013**National Status: Not Scarce, Native****S Hants: Not Ranked**

Native

A plant of coastal marshes, ditches and damp disturbed ground, creeks and estuary heads, almost invariably where fresh water seeps or flows into saline. Townsend's *Flora* gives some inland sites, none of which would have had saline springs. There are two more recent inland locations, one of which (Damerham) is listed below, also in a non-saline situation; this needs to be followed up, given the early time of year when recorded, as inland sites elsewhere in the country and the near Continent are almost invariably brackish.

Also recorded in the past in various places along the coast W from Milford-on-Sea (SZ29), and at Lymington (SZ39I), Marchwood (SU31W) and Bursledon (SU41V).
