

**National Status: Not Scarce, Native**

**S Hants: Not Scarce**

Native

Although this is a rather local species and suffers from human pressure in some of its sites, the 1996 *Flora* noted that there appeared to be a partial recovery at some beaches, and recently this seems to have been supplemented by a spread in small numbers to other sites where there is at least a small accumulation of coastal sand. Also recorded on the Bournemouth shore (SZ09V in 1966, SZ19A in 1962); Millbrook (SU31W) in the 1950s; Hill Head (SU50G and c. SU5402) in the second half of the 19<sup>th</sup> century and 1986; south coast of Portsea (SZ69) in 1862-3.
